Lake Smit and Partners, Durban

Presentation

An active 43-year-old woman hockey player presented with subacute left hip pain after a mountain-biking accident. The following images were obtained. We invite you to describe the relevant findings and provide the most appropriate clinical diagnosis. Please submit your response to shalendramisser@hotmail.com by 10 February 2011. The winning respondent will receive a R1 000 prize from the RSSA. A detailed diagnosis will appear in the next issue of the *SAJR*.
