Neuro imaging

Presentation
A 50 year-old gentleman of otherwise excellent health presents with recent onset of left upper limb weakness and left facial nerve palsy. These are selected MR images.

FIGURE 4: Coronal post contrast T1-weighted MR image.

FIGURE 5: Axial post contrast T1-weighted MR image.

FIGURE 6: Axial rCBV MR Perfusion image.
Describe the relevant imaging findings and formulate the most appropriate clinical diagnosis. Please submit your response to misser@lakesmit.co.za not later than 30 September 2015. The winning respondent will receive a R1000 award from the RSSA. A detailed diagnosis and discussion will be presented in the next issue of the SAJR.
